UNBELIEVABLE SUPERGLAS

CLEANING GUIDE FOR KOZIOL SUPERGLAS

koziol SUPERGLAS is made of an exceptional **unbreakable high-tech plastic**. A true design statement and a small revolution for gastronomy and hotels and the most ecological and economical solution for professional use.

The robust material **reduces work for personnel and prevents accidents and injury from glass shards**. Koziol SUPERGLAS complies with the regulations for secure outdoor use and all areas with a glass ban.

Caring for these plastic glasses is essentially like caring for traditional glass.

To enjoy SUPERGLAS for years to come, **please follow our cleaning recommendations:**

- / New glasses should be rinsed at temperatures above 80° either in the dishwasher or by hand to reduce tension in the glass.
After that, please make sure that you use a detergent with a PH between 5 and 7 and rinse aids made especially for plastic. Best results are achieved with cleaning agent Renovate® from Proton.
- / Always set glasses loosely into the dishwasher and wash at a maximum of 70°C.
Printed glasses up to 60°C. Avoid drying with hot air fans.
- / Avoid using scouring pads or abrasive cleansers for the removal of residue.
When hand washing, always use a soft sponge or dish brush.
- / Soft microfiber cloths are preferred for polishing.
- / Drinks containing anise like Pernod, Ricard, Raki und Ouzo can damage the material.
We recommend washing the glasses directly after use.
- / Milk beverages can also leave stubborn residue behind, here too rinse directly after use.
